# 1 Introduction

## 1.1 Reporting Complex Account Structure

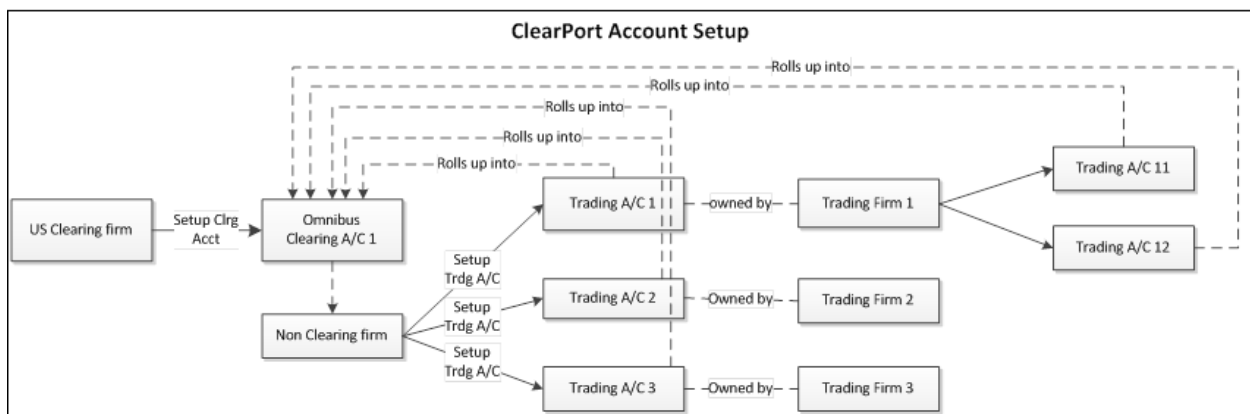

In a clearing organization such as CME a clearing firm's trading account structure can be quite complex:

- A clearing account can have multiple trading accounts
- Each trading account can in turn have multiple trading accounts belonging to different trading firms.

The trading firms will register the relationships at the clearing organization so that account relationships are known. When reporting trades, the account relationships need to be identified so that clearing firm confirmations can be routed to the appropriate trading firms.

Given the structure outlined in Figure 1 below if a trade applies to Trading A/C 11 then confirmations should identify not only Trading AC 11 but also Trading A/C 1 and Clearing A/C 1. Today the confirmation can only identify Clearing A/C 1 in PartyRole(452)=24 (Customer Account).

**Figure 1: US Clearing Firm Trading Accounts**

## 1.2 Trade at Settlement and Trade at Marker Spread Price

Trade at Settlement (TAS) and Trade at Marker (TAM) contracts are negotiated at a plus-or-minus currency spread to the settlement or time marker price of the commodity. Reporting of single trades identifies them through TrdSubType(829)=41 (Trade at Settlement) or 43 (Trade at Marker), where the spread price is reported in DifferentialPrice(1522) and final calculated price in LastPx(31).

The industry now supports trading a group of TAS or TAM contracts as an atomic unit, thus the negotiated spread and final price of each individual contract in the trade need to be reported in the leg instance. The business has determined that multileg TAS or TAM trades can only contain contracts of the same type, i.e. TAS and TAM cannot be intermingled and neither can be traded with other kinds of assets. Thus TrdSubType(829) will continue to identify these trades even when they are multileg trades.

## 1.3 Summary of Proposed Changes

To enable reporting account relationships, we propose the following:

- Add the PartyDetailGrp component to the TrdCapRptSideGrp component of the TradeCaptureReport (35=AE) message
- Add a new RelatedPartyDetailRole(1565) enumeration value for Trading Subaccount

That would provide for reporting the relationships as shown in Figure 2 and Figure 3 in Appendix D - Usage Examples.

To support Trade at Settlement (TAS) and Trade at Marker (TAM) spread price we propose the following:

- Add a new LegDifferentialPrice(~~2492~~~~td~~) field to the TrdInstrmtLegGrp component
- Enhance the description of DifferentialPrice(1522) to clarify its use in trading single TAS and TAM contracts. Also correct its datatype from Price to PriceOffset

See

Figure 4 and

Figure 5 in Appendix D - Usage Examples.

## 2 Business Requirements

### 2.1 Reporting Complex Account Structure

Each clearing member of a clearing organization serves a network of trading firms and accounts. While clearing members could be tasked with keeping track of the relationships applicable to each trade, having that information submitted for clearing and reported back to the member post-clearing assists in trade reconciliation. Adding the component and enumeration value we propose satisfies that need.

### 2.2 Trade at Settlement and Trade at Marker Spread Price

Trade at Settlement (TAS) and Trade at Marker (TAM) contracts are negotiated at a plus-or-minus currency spread to the settlement or time marker price of the commodity. Both the negotiated spread and the final calculated price must be reported. The industry now supports trading a group of TAS or TAM contracts as an atomic unit, thus the negotiated spread and final price need to be reported in each leg component.

## 3 Issues and Discussion Points

	Issue	Date	Status	Discussion
1	Alternatives to Reporting Complex Account Structure	Dec. 10, 2015	Closed	Add the entire PartyDetailGrp component, but you'll be duplicating the clearing account as the PartyDetailID/PartyDetailRole, and then use the RelatedPartyDetailGrp within PartyDetailGrp to express that Trading Sub A/C 11 and Trading Sub A/C 2 "clears through" Clearing A/C 1 identified in PartyDetailID. The Parties component would remain same and contain only the

	Issue	Date	Status	Discussion
				Clearing A/C 1.
2	Correct the data type for existing DifferentialPrice(1522) field	Sept. 5, 2016	Closed	The data type for the existing DifferentialPrice(1522) is currently "Price" when it should be "PriceOffset".

## 4 Proposed Message Flow

*No changes.*

## 5 FIX Message Tables

*No changes.*

## 6 FIX Component Blocks

### 6.1 Component TrdCapRptSideGrp

To be completed at the time of the proposal – all information provided will be included in the repository	
Component Name	TrdCapRptSideGrp
Component Abbreviated Name (for FIXML)	RptSide
Component Type	_X_ Block Repeating ___ Block
Category	<i>(no change)</i>
Action	__New <b>X_Change</b>
Component Synopsis	<i>(no change)</i>
Component Elaboration	<i>(no change)</i>
To be finalized by FPL Technical Office	
Repository Component ID	2061
